

Vista

Complete Visibility of Your Vehicle Operations

Pointer Vista is a best-in-class in-vehicle video platform that leverages the latest artificial intelligence (AI) to analyze and proactively manage risky driving situations across your fleet. Vista delivers real-time high-definition video, from road and driver facing cameras, to bolster safety programs, help exonerate drivers, prevent accidents, increase security, and lower insurance costs.

Easy to install and operate, Vista can run as a stand-alone platform or as an integral component of other fleet management systems. Vista's dash-camera sensors can auto-detect unsafe driving conditions while delivering audio feedback and warnings to help correct risky driving as it occurs. Vista wireless connectivity supports 4G LTE and has built-in Wi-Fi that supports auxiliary cameras for 360° views.

Features

- Manage all your vehicles from a secured cloud portal.
- Get instant access to live video and video retrievals for each vehicle.
- View vehicle GPS route tracking details and history logs.
- View and download captured video events.
- Configure camera-event settings.
- Desktop & Mobile access to platform.

Problems Solved

Increase Safety & Security: For drivers, pedestrians, people, and assets.

Reduce fraudulent insurance claims.

Prevent external and internal thefts.

Educate drivers of their driving habits.

Meet customer and regulatory requirements.

Save on insurance premiums.

Managing Your Vehicle Operations Effectively, Efficiently, And Safely

- Quickly find & analyze vehicle incidents and risks.
- Vista identifies, visualizes, and categorizes critical events so that you can quickly take corrective actions.
